To whom it may concern

Dear Sirs:

We have used SynTest TurboBIST-Logic, the TurboBIST-Memory and the TurboBSD, and SynTest DFT Consulting Services in one of our large and complex designs. This particularly design has about 12 million gates, many memory modules, and with more than 8 clock domains.

We were very happy with SynTest DFT tools because their tools and tool flow were integrated and worked well with our existing design environment. Their tools successfully produced the required intended test hardware and software for our product.

We also were very please with SynTest Consulting Team. They supported and trained our design team in the DFT implementation phase. Their work and commitment were outstanding and professional. They helped UNM completed the DFT implementation under a very aggressive schedule. And, with the training obtained from SynTest, our engineers now can implement the Logic BISTs, using SynTest tool, on an upcoming new design on their own.

Overall, we were very happy with SynTest DFT tools and services. We have decided to reuse SynTest tool on the 2nd design and have no hesitation to recommend them to others, as well.

Sincerely,

Ken Choy
